- Occlusions and shadows: Buildings, trees, and shadows can obscure parts of the roads.
- Complex backgrounds: Urban scenes may contain similar textures and colors that can confuse detection algorithms.
- Different imaging conditions: Variations in lighting, weather, and image resolution complicate the process.

Addressing these challenges requires a combination of image enhancement, segmentation, and post-processing techniques to achieve accurate road extraction.

## Setting Up Your MATLAB Environment

Begin by ensuring your MATLAB environment is ready:

- MATLAB R2020b or later recommended.
- Image Processing Toolbox installed.
- Optional: Computer Vision Toolbox for advanced features.

You can load aerial images in common formats like JPEG, PNG, or TIFF using `imread`.

## Step-by-Step Guide to Road Detection from Aerial Images in MATLAB
