To market to market is a phrase that is primarily associated with the commodities and futures markets. It refers to the process of marking a futures contract to its current market value at the end of a trading day. Essentially, it involves adjusting the value of a futures position to reflect current market prices, which can lead to either gains or losses that are settled daily.

In the broader sense, the phrase can also imply the ongoing process of adapting or aligning one's offerings or strategies to current market conditions, though this is more of a figurative use.

Technical Explanation in Finance

In futures trading, "marking to market" is a routine process where the gains and losses are calculated daily based on the closing prices. This process ensures that the account reflects the true market value of open positions, which:

- Protects both parties from excessive risk.
- Ensures timely settlement of gains and losses.
- Maintains financial integrity within the trading system.

For example, if an investor holds a futures contract that increases in value during the trading day, their account will be credited accordingly. Conversely, if the value declines, their account will be debited.

Historical Background

The phrase has roots in agricultural markets and trading practices dating back to the 18th and 19th centuries.
